NORTHISLE COPPER AND GOLD INC. COMPLETES DRILLING PROGRAM

Vancouver, B.C. – Northisle Copper and Gold Inc. (“Northisle” or the “Company”) is pleased to report the completion of a 1,846 metre diamond drilling program on its wholly owned North Island Copper-Gold project on Vancouver Island, British Columbia.

The program consisted of six holes, five targeting three exploration targets and one directed at collecting a metallurgical sample for future testing.

Core samples from this year’s drill program have been sent to BVL Minerals’ laboratory in Vancouver. Results will be announced once analyses from all holes have been received and compiled.

The exploration drilling focused primarily on three target areas:

1. The southeastern extension of the Hushamu deposit outside of the current resource boundary.
2. A 300 metre diameter area within the current Hushamu resource where historical widely-spaced vertical drill holes indicated very low-grade or no mineralization was present.
3. A test for deeply buried porphyry copper and gold mineralization to the south of the Red Dog Deposit.

The hole testing the southeastern extension intersected porphyry-type alteration and sulphide mineralization over its entire length of 225 metres. In addition, the 3 angled holes drilled within the 300 metre diameter zone previously classified as “barren” confirmed that the previous historical holes had been drilled down relatively narrow post mineralization dykes.

The single hole testing the deep porphyry target at the Red Dog Deposit encountered high-level porphyry copper alteration from bedrock to 290 metres where the hole was lost due to caving material from a fault higher in the hole.

The Company also reports that detailed engineering studies are nearing completion and the Preliminary Economic Assessment (PEA) on the combined the Hushamu and Red Dog deposits and it is anticipated that the PEA will be completed by the end of August.

About Northisle

The North Island Copper-Gold Project is situated approximately 15-40 kilometres southwest of Port Hardy, BC near the formerly producing Island Copper Deposit on the north end of Vancouver Island. The deposit contains the Hushamu and Red Dog deposits and five other partially explored copper-gold porphyry occurrences. The project is 100% owned by Northisle.

The Hushamu Resource

The Company has a current resource estimate of the Hushamu Deposit which has been filed on SEDAR.

	Tonnes (x1000)	Resource Grade				Contained Metal				
		Copper %	Gold g/t	Mo %	Re ppm	Cu Eq %	Copper B lb	Gold M oz	Mo M lb	Re Kg x 1000
Indicated	304,000	0.21	0.29	.010	0.55	0.45	1.4	2.8	65.7	167.4
Inferred	205,600	0.18	0.26	.008	0.38	0.39	0.8	1.7	34.9	78.1

*** Copper equivalent calculated using US\$2.50/lb Cu, US\$1100/oz Au and US\$14.00/lb Mo and is not adjusted for mining and metallurgical recoveries as these remain uncertain. The formula used is as follows: $CuEQ = (Cu\% \times 22.0462 \times 2.50) + (Au \text{ g/t} \times 1100.00 / 31.1035) + (Mo\% \times 22.0462 \times 14.00)$. Rhenium values have not been used in the cut-off grade or Cu Equivalent calculations*

The Red Dog Resource

The Red Dog Resource is located 8km northwest of the Hushamu Deposit and hosts a NI 43-101 Indicated Resource of 23.6 million tonnes grading 0.32% copper, 0.46gpt gold and 0.007% molybdenum.
